1. The amendment submitted by Applicants November 2, 2005 has been received and entered.

2. Claims 1, 4 and 7 have been canceled.

Claims 2-3, 5-6 and 8 are allowed.

3. The following is an examiner's statement of reasons for allowance:

The closest prior art to the present invention is Keeney (U.S. Patent No. 5,798,966).

Kenney disclosed a memory device having voltage generator adjust the programming voltage according to the position of the memory cell. Kenney failed to show or suggest a program potential generating circuit includes a booster circuit which generates a boosted potential, a regulator circuit which generates the program potential according to the boosted potential and a reference potential, wherein the program potential generated by the regulator circuit is adjusted according to a first address and a second address as in claims 2-4. Kenney also failed to show or suggest the program potential adjusting circuit performs inversion control that either inverts or does not invert a second address signal, depending on a first address signal, and supplies the second address signal having undergone the inversion control to the program potential generating circuit as the program potential adjusting signal as in claim 5 and 8. Kenney did not show or suggest two of the blocks have different arrangements of a second address represented by the second address signal such that the second address is arranged in reversed orders between the two blocks in relation to distance from the program potential generating circuit, the program potential being adjusted according to the second
